

Paramotor Cocoon

THE NEXT STEP IN COMFORT AND EFFICIENCY

Paramotor Cocoon

The Paramotor cocoon not only keeps you warm and comfortable. It also increases performance and is easy to use.

It's available in 2 options:

1. Paramotor Cocoon + Paramotor Cockpit
2. Paramotor Cocoon + Rescue Cockpit

EASY TO USE

The cocoon opens at the bottom so is easy to step in.

A smart system enables attachment to almost any frame.

OPTION 1. PARAMOTOR COCOON + PARAMOTOR COCKPIT

The cocoon is designed to be used with the optional Paramotor Cockpit.

The cockpit offers 9L of space for the cocoon, flight instruments or even bivouac supplies!

Adjustable straps support the weight of the cockpit and keep the instrument panel at the correct angle.

A buckle on the cockpit holds up the cocoon during take-off.

OPTION 2. PARAMOTOR COCOON + RESCUE COCKPIT

For pilots who prefer to fly with a front rescue, the optional GIN Rescue Cockpit can be used instead of the paramotor cockpit. The rescue cockpit is delivered with rescue bridle.

Weight: 600g
